GULU UNIVERSITY

Version 1.0 | September 2026

Foundation: Gulu University RIF 2026 documents

Benchmark: Operational practices observed in comparable university research-fund workflows

Purpose: Blueprint for requirements, database, UI/UX, development, testing and institutional review

Document Control

Item	Detail
Document	Gulu RIF-MIS Detailed Business Process Specification
Version	1.0
Status	Proposed business/process specification
Primary process source	Gulu University RIF 2026 Call for Applications and Application Form/Detailed Proposal Guidelines
Primary office	Directorate of Research and Graduate Training (DRGT)
Decision body referenced in source form	Board of Research and Graduate Training
System scope	End-to-end RIF lifecycle, from call publication to project close-out and impact tracking
Important note	This document specifies a proposed digital workflow. It does not replace University policy, approved procedures or delegated authorities.

1. Purpose

This specification translates Gulu University's existing RIF 2026 process into a controlled digital business workflow. The system is intended to replace fragmented document/email handling with traceable electronic submission, screening, review, decision, award, implementation, reporting and close-out processes.

Gulu University's current 2026 call is publicly advertised and applications are submitted electronically to the Directorate of Research and Graduate Training. The University has published the 2026 call on its website. cite turn0search0

The system should therefore digitize the University's established process rather than create a separate funding scheme.

2. Source-of-Truth Principles

- Use the Gulu University 2026 RIF documents as the primary business-rule source.
- Preserve Gulu terminology such as Research Project, Innovation Project, Policy Research Project, Technology Development, Prototype Development, Commercialization Initiative, Community-Based Research and Multidisciplinary Research.
- Treat approval authority, eligibility rules, funding ceilings and institutional procedures as configurable rules rather than hard-coded assumptions.
- Where a workflow step is not explicitly defined in the supplied Gulu documents, mark it as a proposed system control requiring institutional confirmation.
- Makerere/comparable-fund practices may inform workflow design, but must not silently become Gulu policy.

3. Current Gulu RIF Process — AS-IS

The 2026 Gulu documentation establishes a structured application and evaluation process. The application form captures applicant/team information, project information, priority area, duration, budget, proposal narrative, outputs/outcomes/impact, methodology, knowledge translation, innovation/commercialization, inclusion, ethics, risks, workplan and budget. It also contains an official-use section covering eligibility, technical review score, funding decision, amount awarded and comments.

Stage	Current process evidence	Digital implication
Call	RIF 2026 call published with theme, objectives, priorities, eligibility,	Call should become a configurable RIF cycle.

	categories, requirements and dates.	
Submission	Application materials are submitted electronically to DRGT by email.	Replace email package with authenticated portal submission.
Application	Structured form plus technical proposal, workplan, budget, CVs, ethics and collaboration documents where relevant.	Use multi-section online application with attachment controls.
Eligibility	Official-use section includes eligibility check.	Create a formal screening queue and checklist.
Technical review	Official-use section includes technical review score; guidelines define seven weighted criteria.	Create reviewer assignment, conflict declaration, scoring and moderation.
Funding decision	Official-use section records funding decision, amount awarded and comments.	Create committee/Board decision workspace and decision record.
Project	Call specifies project commencement date; deliverables and workplan are part of proposal requirements.	Create award, project, milestone and reporting records.
Close-out	The supplied 2026 documents establish outputs, outcomes, impact, sustainability and results framework, but do not fully specify a digital close-out workflow.	Create a proposed close-out process subject to institutional approval.

4. Proposed TO-BE End-to-End Workflow

The proposed system lifecycle is:

1. RIF cycle is created and approved internally.
2. Call is configured with theme, priority areas, categories, eligibility rules, dates, requirements and funding parameters.
3. Call is published on the Gulu University website and RIF portal.
4. Applicant creates/signs into a researcher account and completes profile/team information.
5. Applicant selects a call and starts an application.
6. System validates mandatory fields, attachments, dates and budget totals.
7. Applicant submits; system locks the submitted version and generates an application reference.
8. DRGT performs eligibility/administrative screening.
9. Eligible applications enter technical review; ineligible applications receive a recorded reason and appropriate status.
10. Reviewers are assigned according to approved reviewer rules and declare conflicts of interest.
11. Reviewers score proposals against the approved criteria and submit comments.
12. System calculates scores and produces a review summary.
13. Authorized committee/Board reviews applications, scores, comments, budgets and strategic considerations permitted by University procedure.
14. Funding decision and approved amount are recorded.
15. Successful applicant receives award notification and enters contracting/acceptance stage.
16. Project is created from the approved application; milestones, budget lines, reporting schedule and responsible persons are established.
17. Funds are released through approved institutional financial processes and tracked against project allocations.
18. Project team submits required progress/financial reports and evidence.
19. DRGT/authorized monitors review progress, record decisions, actions and follow-up.

20. Variations, extensions or corrective actions are handled through controlled approval workflows.
21. Project completes deliverables and submits final technical/financial/impact documentation.
22. Authorized office performs close-out and records final status.
23. Outputs, innovations, IP/commercialization, policy uptake and impact evidence continue into an impact/knowledge-management record where applicable.

5. Actors and Roles

Role	Core responsibilities	System access
Applicant / Principal Investigator	Create application, manage team, submit proposal, respond to queries, manage project reports and evidence.	Applicant portal
Co-Investigator / Team Member	Contribute to application and project records as permitted.	Team workspace
DRGT Administrator	Configure calls, manage applications, perform administrative screening, coordinate reviews, monitor workflow.	Administrative portal
Reviewer	Review assigned proposals, declare conflicts, score criteria and submit comments.	Reviewer portal
Board/Committee Member	Access assigned decision materials and record decisions within authority.	Decision dashboard
Authorized Approver	Approve decisions, awards, variations or close-out actions within delegated authority.	Approval workspace
Finance Officer	Track approved budgets, releases, accountability and financial status within integrated/controlled processes.	Finance workspace
Monitoring/M&E Officer	Track milestones, reports, indicators, risks, field monitoring and corrective actions.	M&E workspace
Innovation/IP/Commercialization Officer	Track innovations, IP actions, technology transfer, industry links and commercialization pathways where applicable.	Innovation workspace
System Administrator	Manage users, roles, configuration, security and audit controls.	System administration
Public user	View published calls, guidance and public information only.	Public portal

6. RIF Cycle and Call Management

A RIF cycle should be a first-class system object. This prevents dates, criteria and rules from being scattered across code.

Field	Purpose
Call ID / Reference	Unique identifier such as GU/RIF/01/2026.
Financial year / cycle	Groups awards and reports.
Theme	Stores the official call theme.
Priority areas	Configurable list drawn from approved call.

Funding categories	Configurable categories matching the call.
Eligibility rules	Rules used during screening.
Opening/deadline dates	Control application window.
Review period	Stores planned review dates.
Announcement date	Stores planned decision notification date.
Project commencement date	Stores planned start date.
Required documents	Controls application completeness.
Evaluation criteria	Stores criteria, weights and scoring rules.
Status	Draft, internally approved, published, closed, under review, completed, archived.

7. Applicant Registration and Profile

- Authenticate the applicant using an approved university identity method where available.
- Maintain researcher profile separately from individual applications so information can be reused and updated.
- Capture staff/academic identity, department/unit, faculty/school, contact details and research interests as approved by the University.
- Support external collaborators where allowed by the call.
- Allow team invitations and controlled acceptance by co-investigators.
- Prevent unauthorized editing of locked/submitted applications.
- Maintain a history of profile changes relevant to audit.

8. Application Workflow

Step	System behavior	Output
Create draft	Applicant selects call and starts application.	Draft application ID
Applicant/team	Capture PI, co-investigators, external collaborators and project information.	Structured team record
Project classification	Applicant selects approved RIF category/categories as applicable.	Classification record
Proposal sections	Capture narrative sections required by the call/guidelines.	Complete proposal record
Workplan	Capture activities, dates, responsible persons, outputs and milestones.	Structured workplan
Budget	Capture itemized costs and justification.	Budget with calculated totals
Attachments	Upload CVs, ethics material, collaboration letters, instruments and other required evidence where applicable.	Document package
Validation	Check mandatory fields, dates, file types, budget arithmetic and required declarations.	Validation result
Declaration	Applicant confirms accuracy and submits.	Electronic declaration
Submission	System timestamps and locks submitted version.	Submitted application + receipt

9. Eligibility and Administrative Screening

The system should convert the official eligibility check into a controlled checklist. The exact rules should be configured from the approved call.

- Applicant/team eligibility.
- Required academic/research affiliation.
- Correct call and funding category.
- Required proposal sections completed.
- Required attachments present.
- Budget and workplan present.
- Ethics documentation/plan where applicable.
- Collaboration/support documentation where relevant.
- Required declarations completed.
- Submission received before deadline.

Each screening decision must store: criterion, result, reviewer/administrator, date/time, comment and supporting evidence where applicable.

Possible statuses: Submitted → Screening → Eligible → Ineligible → Returned for permitted correction → Review Ready. Any 'return for correction' rule should be formally approved because the supplied call does not specify a post-submission correction mechanism.

10. Technical Review and Scoring

Gulu's detailed guidelines provide a 100-point evaluation logic: scientific rigor 25%, innovation potential 20%, policy relevance 15%, impact potential 20%, feasibility 10%, team strength 5%, and budget efficiency 5%. The system should implement these as configurable criteria rather than embedding them permanently in application code. filecite turn0file0 L350-L361

Criterion	Weight	Digital scoring requirement
Scientific rigor	25	Score, comments, evidence/notes
Innovation potential	20	Score, comments, evidence/notes
Policy relevance	15	Score, comments, evidence/notes
Impact potential	20	Score, comments, evidence/notes
Feasibility	10	Score, comments, evidence/notes
Team strength	5	Score, comments, evidence/notes
Budget efficiency	5	Score, comments, evidence/notes
Total	100	Automatic weighted total

- Reviewer accepts confidentiality and conflict-of-interest declaration before accessing a proposal.
- Reviewer cannot edit the applicant's proposal.
- Reviewer sees only assigned proposals unless authorized otherwise.
- Each score must have a comment or justification if required by institutional rules.
- System calculates weighted totals automatically.
- Submitted reviews become immutable; corrections require a controlled re-open action.
- Reviewer identity and timestamps are retained in the audit trail.
- Where multiple reviewers are used, the system should retain each individual score and produce a separate aggregated view.

11. Committee / Board Decision Workflow

The supplied Gulu application form identifies the official-use stages of eligibility check, technical review score, funding decision, amount awarded and comments, followed by the Chairperson/Board section. filecite turn0file0 L213-L249

24. DRGT prepares decision docket from review-ready applications.
25. Authorized committee/Board members access decision materials.
26. Members record declarations/conflicts where required.
27. System presents proposal summary, scores, reviewer comments, budget and eligibility result.
28. Decision is recorded using the institutionally approved decision options.
29. Approved amount is captured separately from requested amount.
30. Decision comments/reasons are recorded.
31. Authorized chair/secretariat confirms the decision record.
32. System locks the decision record and generates notification tasks.

The system must not automatically make a funding decision merely from score. Any ranking, strategic allocation, moderation or other decision rule must be configured only after Gulu University formally approves it.

12. Award and Contract Management

- Create award record linked to the approved application.
- Store approved amount, project period, approved outputs, milestones and conditions.
- Generate or upload the approved award/contract documents.
- Record acceptance/signature status.
- Track outstanding preconditions before project activation.
- Record authorized funding releases or financial transactions through the University's approved financial process.
- Prevent project activation where mandatory award conditions remain incomplete.

13. Project Implementation Management

Object	Examples of data
Project	Title, PI, team, category, approved amount, start/end dates, status
Milestone	Name, due date, responsible person, planned evidence, status
Activity	Description, dates, responsible team, linked output
Output	Publication, report, policy brief, prototype, software, innovation, training material, community product
Outcome	Expected change and evidence
Risk	Risk, likelihood/impact, mitigation, owner, status
Issue	Problem, date raised, action, responsible person, resolution
Change request	Requested change, justification, effect on time/budget/scope, approvals

14. Financial and Budget Management

- Preserve the approved budget as the baseline.
- Separate requested, approved, committed, spent/accounted and remaining amounts where institutional financial integration permits.

- Link expenditure/accountability records to approved budget lines.
- Flag potential overspending or unauthorized budget changes.
- Require controlled approval for budget variations.
- Maintain financial evidence and audit references.
- Do not duplicate the University's official financial ledger if an approved integration can safely expose the required status.

15. Monitoring, Reporting and M&E

The system should support periodic reporting based on the approved project schedule. The supplied Gulu guidelines emphasize expected results, impact pathway, knowledge translation, sustainability, work plan and results framework. filecite turn0file0 L325-L341

Report	Core content
Progress report	Activities completed, milestone status, outputs, challenges, risks, next actions.
Financial report/accountability	Expenditure against approved budget and required supporting evidence, subject to University finance procedures.
Impact update	Evidence of outcomes/impact, beneficiaries, policy/industry/community uptake where applicable.
Innovation update	Prototype/technology progress, validation, IP, industry linkage or commercialization activity where applicable.
Final report	Final activities, outputs, outcomes, impact, lessons, sustainability and required evidence.

16. Innovation, IP and Commercialization

Gulu's application guidelines explicitly ask applicants to describe innovation, commercialization potential, industry partners and technology-transfer plans. filecite turn0file0 L143-L171

- Flag projects with an innovation component.
- Capture innovation/prototype/technology records separately from the research project.
- Track IP-related actions and documents where applicable.
- Record industry or implementation partners.
- Track validation, scale-up, technology transfer and commercialization milestones where applicable.
- Record post-project uptake and commercialization evidence.
- Link outputs to institutional research/innovation records.

This is especially relevant to Gulu University's wider research environment: the University currently publishes research projects and has also reported oversight of STI-funded projects involving commercialization, IP registration and technology uptake. cite turn0search4 turn0search7

17. Knowledge Translation and Impact

- Capture policy engagement activities.
- Track policy briefs and stakeholder engagements.
- Track community beneficiaries and engagement where applicable.
- Track industry adoption or partnerships.
- Track publications and other knowledge outputs.

- Capture evidence supporting claimed outcomes and impacts.
- Allow authorized staff to aggregate impact indicators across the RIF portfolio.

18. Notifications and Communication

Event	Recipient	Notification
Application submitted	Applicant + DRGT	Submission confirmation
Screening completed	Applicant	Status notification where policy permits
Review assignment	Reviewer	Assignment and deadline
Review overdue	Reviewer + DRGT	Reminder/escalation
Decision recorded	Applicant	Decision notification
Award pending action	PI/authorized team	Required action
Report due	PI	Reminder
Report overdue	PI + DRGT	Escalation
Variation decision	PI + relevant office	Decision notification
Close-out	PI + DRGT	Close-out requirements/status

19. Audit Trail and Records Management

- Every material workflow action receives timestamp, user identity and action type.
- Submitted application versions must be retained.
- Reviewer scores and comments must be traceable.
- Decision changes must be auditable.
- Approval actions must record the approving user and date/time.
- Uploaded evidence must retain metadata.
- Deleted records should normally be soft-deleted or archived according to institutional retention rules rather than silently destroyed.
- Audit access should be restricted to authorized roles.

20. Dashboard Requirements

Dashboard	Key indicators
DRGT	Open calls, applications, screening queue, review progress, decisions pending, active projects, overdue reports.
Board/Committee	Applications under consideration, scores, budgets, reviewer summaries, decision status.
Applicant/PI	Application status, award status, milestones, reports due, budget/project status.
Reviewer	Assigned proposals, deadlines, submitted reviews, outstanding reviews.
Finance	Approved portfolio value, releases, accountability status, budget utilization indicators.
M&E	Projects by status, milestones due/overdue, reporting compliance, risks and outcomes.
Innovation	Innovations, prototypes, IP actions, partnerships, commercialization milestones.
Public	Published calls, deadlines, guidance, aggregate non-confidential portfolio information.

21. Status Model

Object	Suggested statuses
Call	Draft → Internal Approval → Published → Closed → Archived
Application	Draft → Submitted → Screening → Eligible/Ineligible → Review → Decision Pending → Approved/Not Approved → Award Processing → Awarded/Closed
Review	Assigned → Accepted → In Progress → Submitted → Locked
Award	Draft → Pending Acceptance → Active → Suspended/On Hold → Completed → Closed
Report	Not Due → Due → Submitted → Under Review → Accepted/Returned → Finalized
Change Request	Draft → Submitted → Under Review → Approved/Rejected → Implemented
Project	Planned → Active → Delayed/At Risk → Completed → Closed

These are proposed system states. Final institutional terminology should be approved before implementation.

22. Exception and Escalation Workflows

- Late application: system rejects after deadline unless an authorized override is recorded.
- Missing attachment: application remains incomplete or is screened according to approved rules.
- Reviewer conflict: reviewer is blocked from the proposal and DRGT is notified.
- Reviewer overdue: reminder and escalation.
- Technical review disagreement: retain individual reviews and route to an authorized moderation process if approved.
- Budget variation: controlled request and approval.
- Project delay: risk/issue record plus approved extension or corrective action where applicable.
- Missing report: reminders followed by escalation.
- System failure at deadline: maintain server logs and provide an authorized administrative recovery procedure; do not silently alter submission timestamps.

23. Security and Access Control

- Role-based access control.
- Least-privilege access.
- Secure authentication and session management.
- Encryption in transit and appropriate protection at rest.
- Confidentiality controls for proposals and reviewer materials.
- Reviewer separation and conflict-of-interest controls.
- Audit logging for privileged actions.
- Regular backup and recovery procedures.
- Controlled file upload validation.
- Protection against unauthorized application modification after submission.

24. Integration Architecture Requirements

The proposed RIF-MIS should be designed as a module that can be integrated with the Gulu University website rather than as an isolated public website.

Integration	Purpose
Gulu University website	Publish calls, guidance and public RIF information.
University identity/staff directory	Authenticate and identify eligible internal users where technically available.
Email service	Send official workflow notifications.
Finance system	Exchange approved financial status where an authorized integration exists.
Document storage	Securely store proposals, reports and evidence.
Research repository	Link approved/public research outputs where appropriate; Gulu University already operates the GU-IR digital repository. cite turn0search6
Analytics/reporting	Portfolio dashboards and management reports.

25. Core Data Entities

- User
- Researcher Profile
- Role
- Organization Unit
- RIF Cycle
- RIF Call
- Priority Area
- Funding Category
- Application
- Application Version
- Project Team
- Team Member
- Proposal Section
- Workplan
- Milestone
- Budget
- Budget Line
- Attachment
- Eligibility Check
- Reviewer
- Conflict Declaration
- Review Assignment
- Review Score
- Review Comment
- Committee Decision
- Award
- Contract/Agreement
- Project
- Project Activity
- Project Output
- Project Outcome
- Risk
- Issue
- Report

- Report Review
- Change Request
- Financial Record
- Innovation
- IP Record
- Commercialization Activity
- Notification
- Audit Event

26. Proposed Workflow Permissions Matrix

Action	Applicant	DRGT	Reviewer	Board/Committee	Finance	M&E	Innovation	Admin
Create application	✓	—	—	—	—	—	—	—
Screen eligibility	—	✓	—	—	—	—	—	—
Review proposal	—	—	✓	—	—	—	—	—
Record funding decision	—	Support	—	✓	—	—	—	—
Manage award	View/act	✓	—	—	Support	—	—	—
Monitor project	Submit	✓	—	—	—	✓	Support	—
Financial tracking	Submit evidence	Support	—	—	✓	—	—	—
Innovation tracking	Submit evidence	Support	—	—	—	Support	✓	—
Manage system users	—	Limited	—	—	—	—	—	✓

27. Functional Requirements

FR-01: The system shall support creation and publication of RIF calls.

FR-02: The system shall maintain configurable call dates and status.

FR-03: The system shall support authenticated researcher accounts.

FR-04: The system shall support multi-person research teams.

FR-05: The system shall provide structured online application forms.

FR-06: The system shall validate mandatory application information.

FR-07: The system shall support controlled document uploads.

FR-08: The system shall generate a unique application reference.

FR-09: The system shall support eligibility screening.

FR-10: The system shall support reviewer assignment.

FR-11: The system shall support conflict-of-interest declarations.

FR-12: The system shall support weighted technical scoring.

FR-13: The system shall calculate review totals automatically.

FR-14: The system shall support committee/Board decision records.

FR-15: The system shall record requested and approved funding separately.

FR-16: The system shall generate award records.

FR-17: The system shall track project milestones and outputs.

FR-18: The system shall support periodic reports and evidence.

FR-19: The system shall support controlled project variations.

FR-20: The system shall support monitoring and impact records.

FR-21: The system shall support innovation/IP/commercialization tracking.

FR-22: The system shall provide dashboards by role.

FR-23: The system shall maintain a complete audit trail.

FR-24: The system shall provide configurable notifications.

FR-25: The system shall support archival and retrieval of completed RIF records.

28. Non-Functional Requirements

- Usability: responsive interface suitable for desktop and mobile browsers.
- Availability: designed for institutional operational use with backup and recovery.
- Performance: common dashboard and form operations should respond promptly under expected institutional load.
- Security: role-based authorization, secure authentication, protected documents and auditable privileged actions.
- Maintainability: modular application architecture with configurable business rules.
- Scalability: capable of supporting multiple RIF cycles and growing project portfolios.
- Accessibility: clear labels, keyboard-friendly controls and readable forms.
- Interoperability: API-ready integration points.
- Traceability: every material decision and change must be attributable.

29. Business Rules Requiring Institutional Confirmation

The following must not be assumed by developers. They should be confirmed by the appropriate Gulu University authority before implementation:

- Exact eligibility rules and exclusions.
- Whether applicants may save/return applications after initial submission.
- Whether submitted applications can be corrected before review.
- Number of technical reviewers per proposal.
- Reviewer selection and conflict-of-interest policy.

- Whether scores are averaged, moderated or otherwise aggregated.
- How ties or closely scored proposals are handled.
- Whether committee/Board may adjust recommended amounts and under what authority.
- Funding release schedule and financial controls.
- Procurement rules applicable to RIF projects.
- Reporting frequency and exact templates.
- Permitted project extensions and variation thresholds.
- Formal close-out requirements.
- IP ownership, commercialization and revenue-sharing rules.
- Record retention periods.
- Appeal/complaint mechanism.
- Public disclosure of funded projects and results.

30. Implementation Phases

Phase	Deliverable
Phase 1	Institutional validation of this business process and confirmation of rules.
Phase 2	UI/UX prototypes for public portal, applicant portal, reviewer portal and DRGT dashboard.
Phase 3	Database and backend architecture.
Phase 4	Call/application/eligibility modules.
Phase 5	Review/scoring/decision modules.
Phase 6	Award/project/financial/reporting modules.
Phase 7	M&E, innovation/IP/commercialization and close-out.
Phase 8	Security, audit, testing, training and pilot.
Phase 9	Institutional acceptance and controlled production rollout.

31. Acceptance Criteria for the First Release

- An authorized DRGT user can create and publish a complete RIF call.
- An eligible applicant can register/sign in, create an application and save progress.
- System validates the required application sections and documents.
- Applicant can submit and receive a reference/confirmation.
- DRGT can screen and record eligibility.
- Reviewer can be assigned, declare conflict, score and submit a review.
- Authorized decision users can view review summaries and record a decision.
- Successful applications can be converted into award/project records.
- PI can view project milestones and submit required reports.
- DRGT can monitor project/report status.
- All key actions appear in an audit trail.
- Role-based users cannot access functions outside their authorization.
- System can generate management reports for the RIF portfolio.

32. Relationship to Gulu University's Existing Digital Ecosystem

Gulu University already maintains a public website with links for research projects and a digital research repository. The RIF-MIS should therefore be designed as an institutional research-management module that complements, rather than duplicates, existing university platforms. cite turn0search5 turn0search6

33. Conclusion

The proposed Gulu RIF-MIS should digitize the University's existing RIF framework while adding workflow control, traceability, structured review, project monitoring and portfolio intelligence. The 2026 Gulu documentation already provides the substantive foundation: strategic priorities, applicant requirements, proposal structure, expected results, innovation/commercialization expectations, work planning, budgeting and an official-use decision section. The next design step is therefore not to invent another RIF policy, but to convert the approved institutional process into a secure, configurable and auditable information system.

The official Gulu University website currently carries the 2026 RIF call, confirming that this is an active institutional process and making the timing appropriate for a requirements-driven digitalization proposal. cite turn0search0

Appendix A — Initial Process Map

CALL CONFIGURATION → PUBLICATION → APPLICANT REGISTRATION → APPLICATION DRAFT → VALIDATION → SUBMISSION → ELIGIBILITY SCREENING → TECHNICAL REVIEW → SCORE AGGREGATION → BOARD/COMMITTEE DECISION → AWARD/CONTRACT → PROJECT ACTIVATION → IMPLEMENTATION → REPORTING → MONITORING → INNOVATION/IP/COMMERCIALIZATION → FINAL REPORT → CLOSE-OUT → IMPACT TRACKING

Appendix B — Source Basis

Primary source: Gulu University 2026 RIF Call for Applications (Ref. GU/RIF/01/2026) and Gulu University 2026 RIF Application Form and Detailed Proposal Guidelines (Ref. GU/RIF/01/2026), supplied in this conversation.

Current web verification: Gulu University's official website lists the 2026 RIF call dated 16 September 2026. cite turn0search0

This specification distinguishes source-derived requirements from proposed system controls. Proposed controls must be validated by Gulu University before implementation.
